# MeetingPoint

Reserve meeting rooms and publish availability

## All the meetings in one overview

Where will the next meeting take place? Is the meeting room taken? With MeetingPoint you control the planning of various rooms and communicate this to your target audience. This is ideal for a seamless process of a school day or efficient use of workspace.

## All information within a blink of an eye

MeetingPoint shows you which reservations have been made for your meeting rooms. In a blink of an eye, you can see all the meetings that have been scheduled for the day, which meetings there are and how long they will last. How convenient!

**LEVEL UP!**

# Manage calendars with ease

## Point out all scheduled meetings

### MeetingPoint & calendars

MeetingPoint is connected to a Google Calendar, Exchange/ Outlook or any other scheduling software that supports (public) \*.ics files. This means that you reserve rooms and manage availability via the calendar that you are common to work with. MeetingPoint retrieves the scheduled meetings and publish the meetings scheduled today and tomorrow.

### Publish meetings from multiple locations

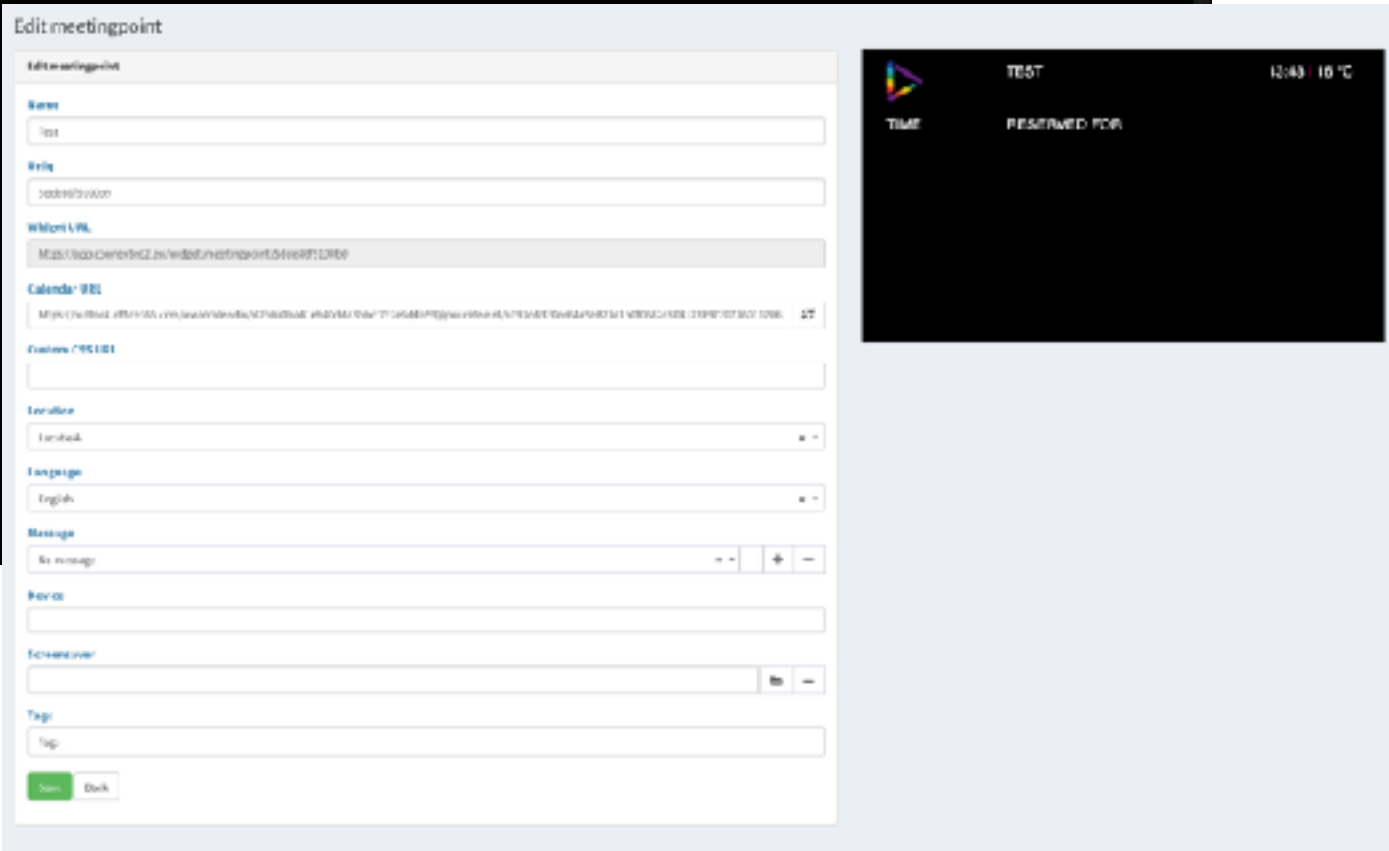

In the backend of MeetingPoint you give each location its own calendar. You can choose to have one dedicated display to show all calendars of all locations. And you can provide each location or meeting room with an own display publishing the current and upcoming meetings of that specific location.

### Security

MeetingPoints allows users to use 2FA and meet the needed security standards.

No meeting  
scheduled?  
Video screensaver  
is possible!

DATE	TIME	RESERVED FOR
03-01	13:45 - 16:45	Online training MagicInfo
04-01	08:30 - 21:30	Demonstration MeetingPoint

#### Easy to connect

MeetingPoint works with Outlook, Google Calender and any other scheduling program that supports (public) \*.ics files.

#### Part of the current solution

Looking for an integration with your current digital signage software? No problem! The software runs in MagicINFO or as an individual module on its own.

#### Own look & feel

Our in-house content studio ensures a corporate design: every display in the look & feel of your business colors!

#### Effective communication

Bundle the separated schedules to 1 clear display! Optional to expand individual displays per location.

LEVEL UP!

# Blends in any interior

## Customizes templates to corporate identity

### Own look and feel

It is important that the displays that indicate the availability of meeting rooms fit in with the interior. That is why MeetingPoint's templates are fully delivered in your own corporate style. Colors, lay-out and logo can all be customized to any desired look and feel.

### Customize to corporate styling

All meetings of all locations can be gathered in a single view or an overview with all meetings scheduled. MeetingPoint includes designing the templates, room availability and schedule overview. This thanks to the CSS customization templates can be created using corporate colors, logo and additional lay-out preferences. Whenever there is nothing to be published MeetingPoint can be set to publish a screensaver like an image or video ensuring the displays will always comply to your corporate branding.

# MeetingPoint requirements

## Need-to-haves for using MeetingPoint

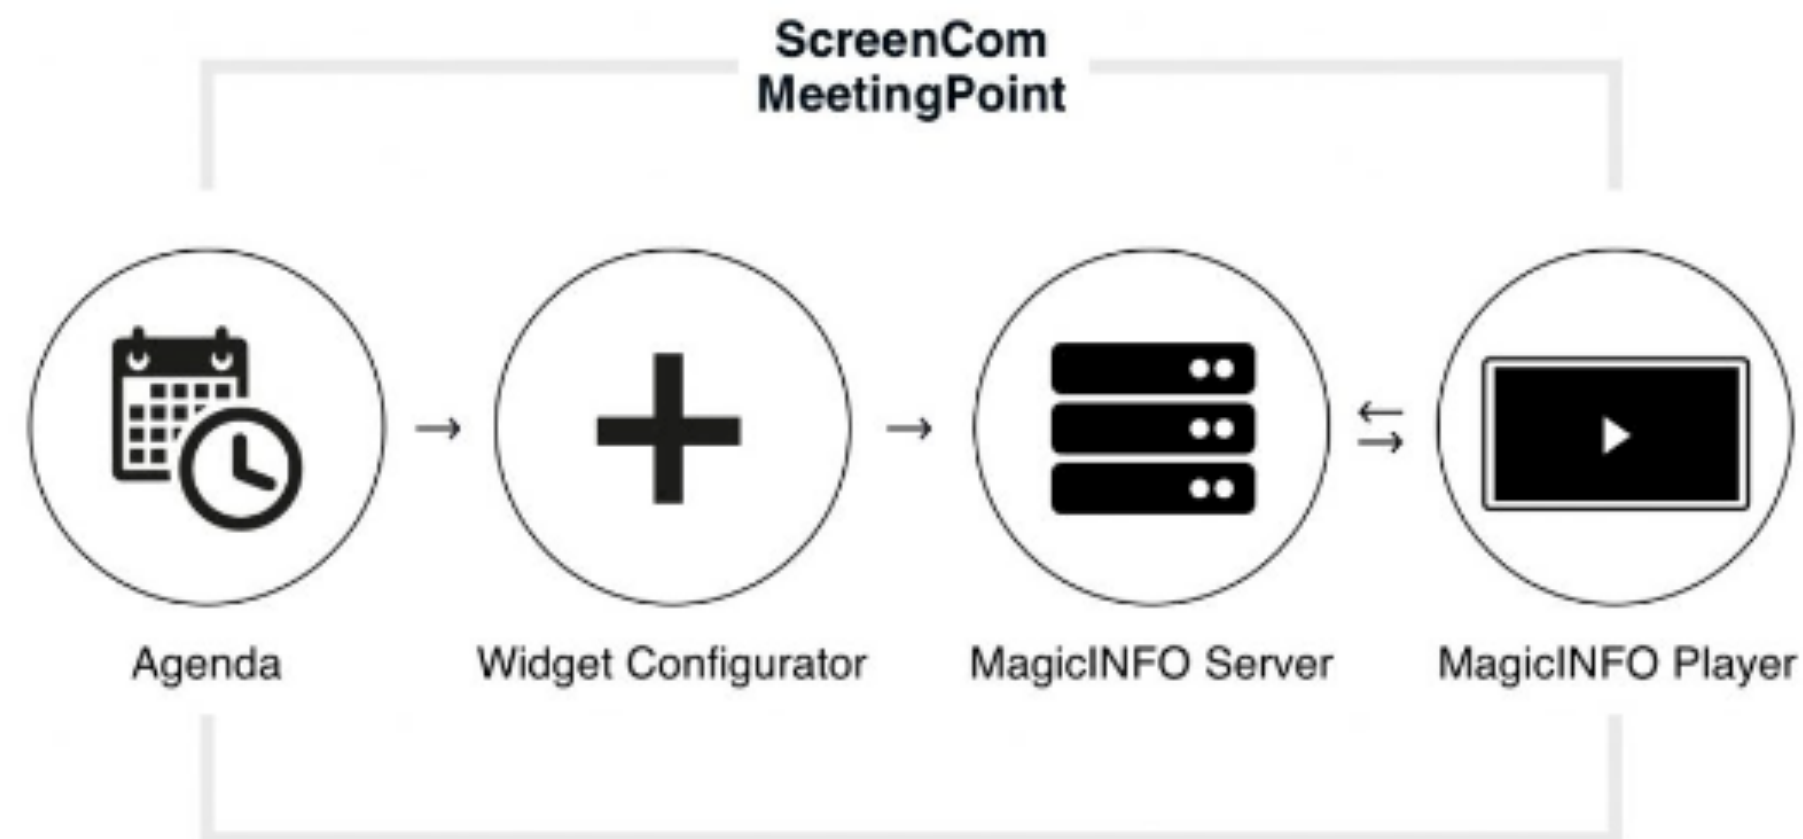

MeetingPoint is one of the easiest and most straightforward solutions there is serving similar purposes. Here's what you need to get started.

### Supported calendars

The ease of MeetingPoint is that you don't need any difficult program to book meetings, just use the agenda you are already using, like Google/Office365 calendar or combine it with any public .ics files.

### Integration MeetingPoint

MeetingPoint easily integrates with a MagicINFO Premium cloud subscription from MagicInfo Services, or a Premium connection (license) on your local installation. But it can also integrate into any other CMS system, since it creates a URL that can be shared and published.

# MeetingPoint requirements

## Need-to-haves for using MeetingPoint

### Best fit hardware

MeetingPoint is built to work with Samsung hardware. You can add as many devices as you want. You need the Samsung smart signage displays with a S6 Premium player or higher. In case your display does not have a S6 player or newer, you can choose to opt for an external signage player box by Samsung and connect this to your display. Please contact your hardware distributor for the options of adding an external player.

### MeetingPoint requirements

- Samsung Digital Signage Display with S6+ player or dedicated Windows computer as external player ✓
- MagicINFO Premium cloud connection or Premium license, or any other CMS ✓
- Any booking program that supports .ics files ✓

GET MAGICINFO I-PLAYER

### Windows computer

It is also possible to use Window computers with MagicINFO installed to run MeetingPoint. To do so, you can download the software for free by clicking the button above.

# More information

Let's talk!

## MeetingPoint pricing

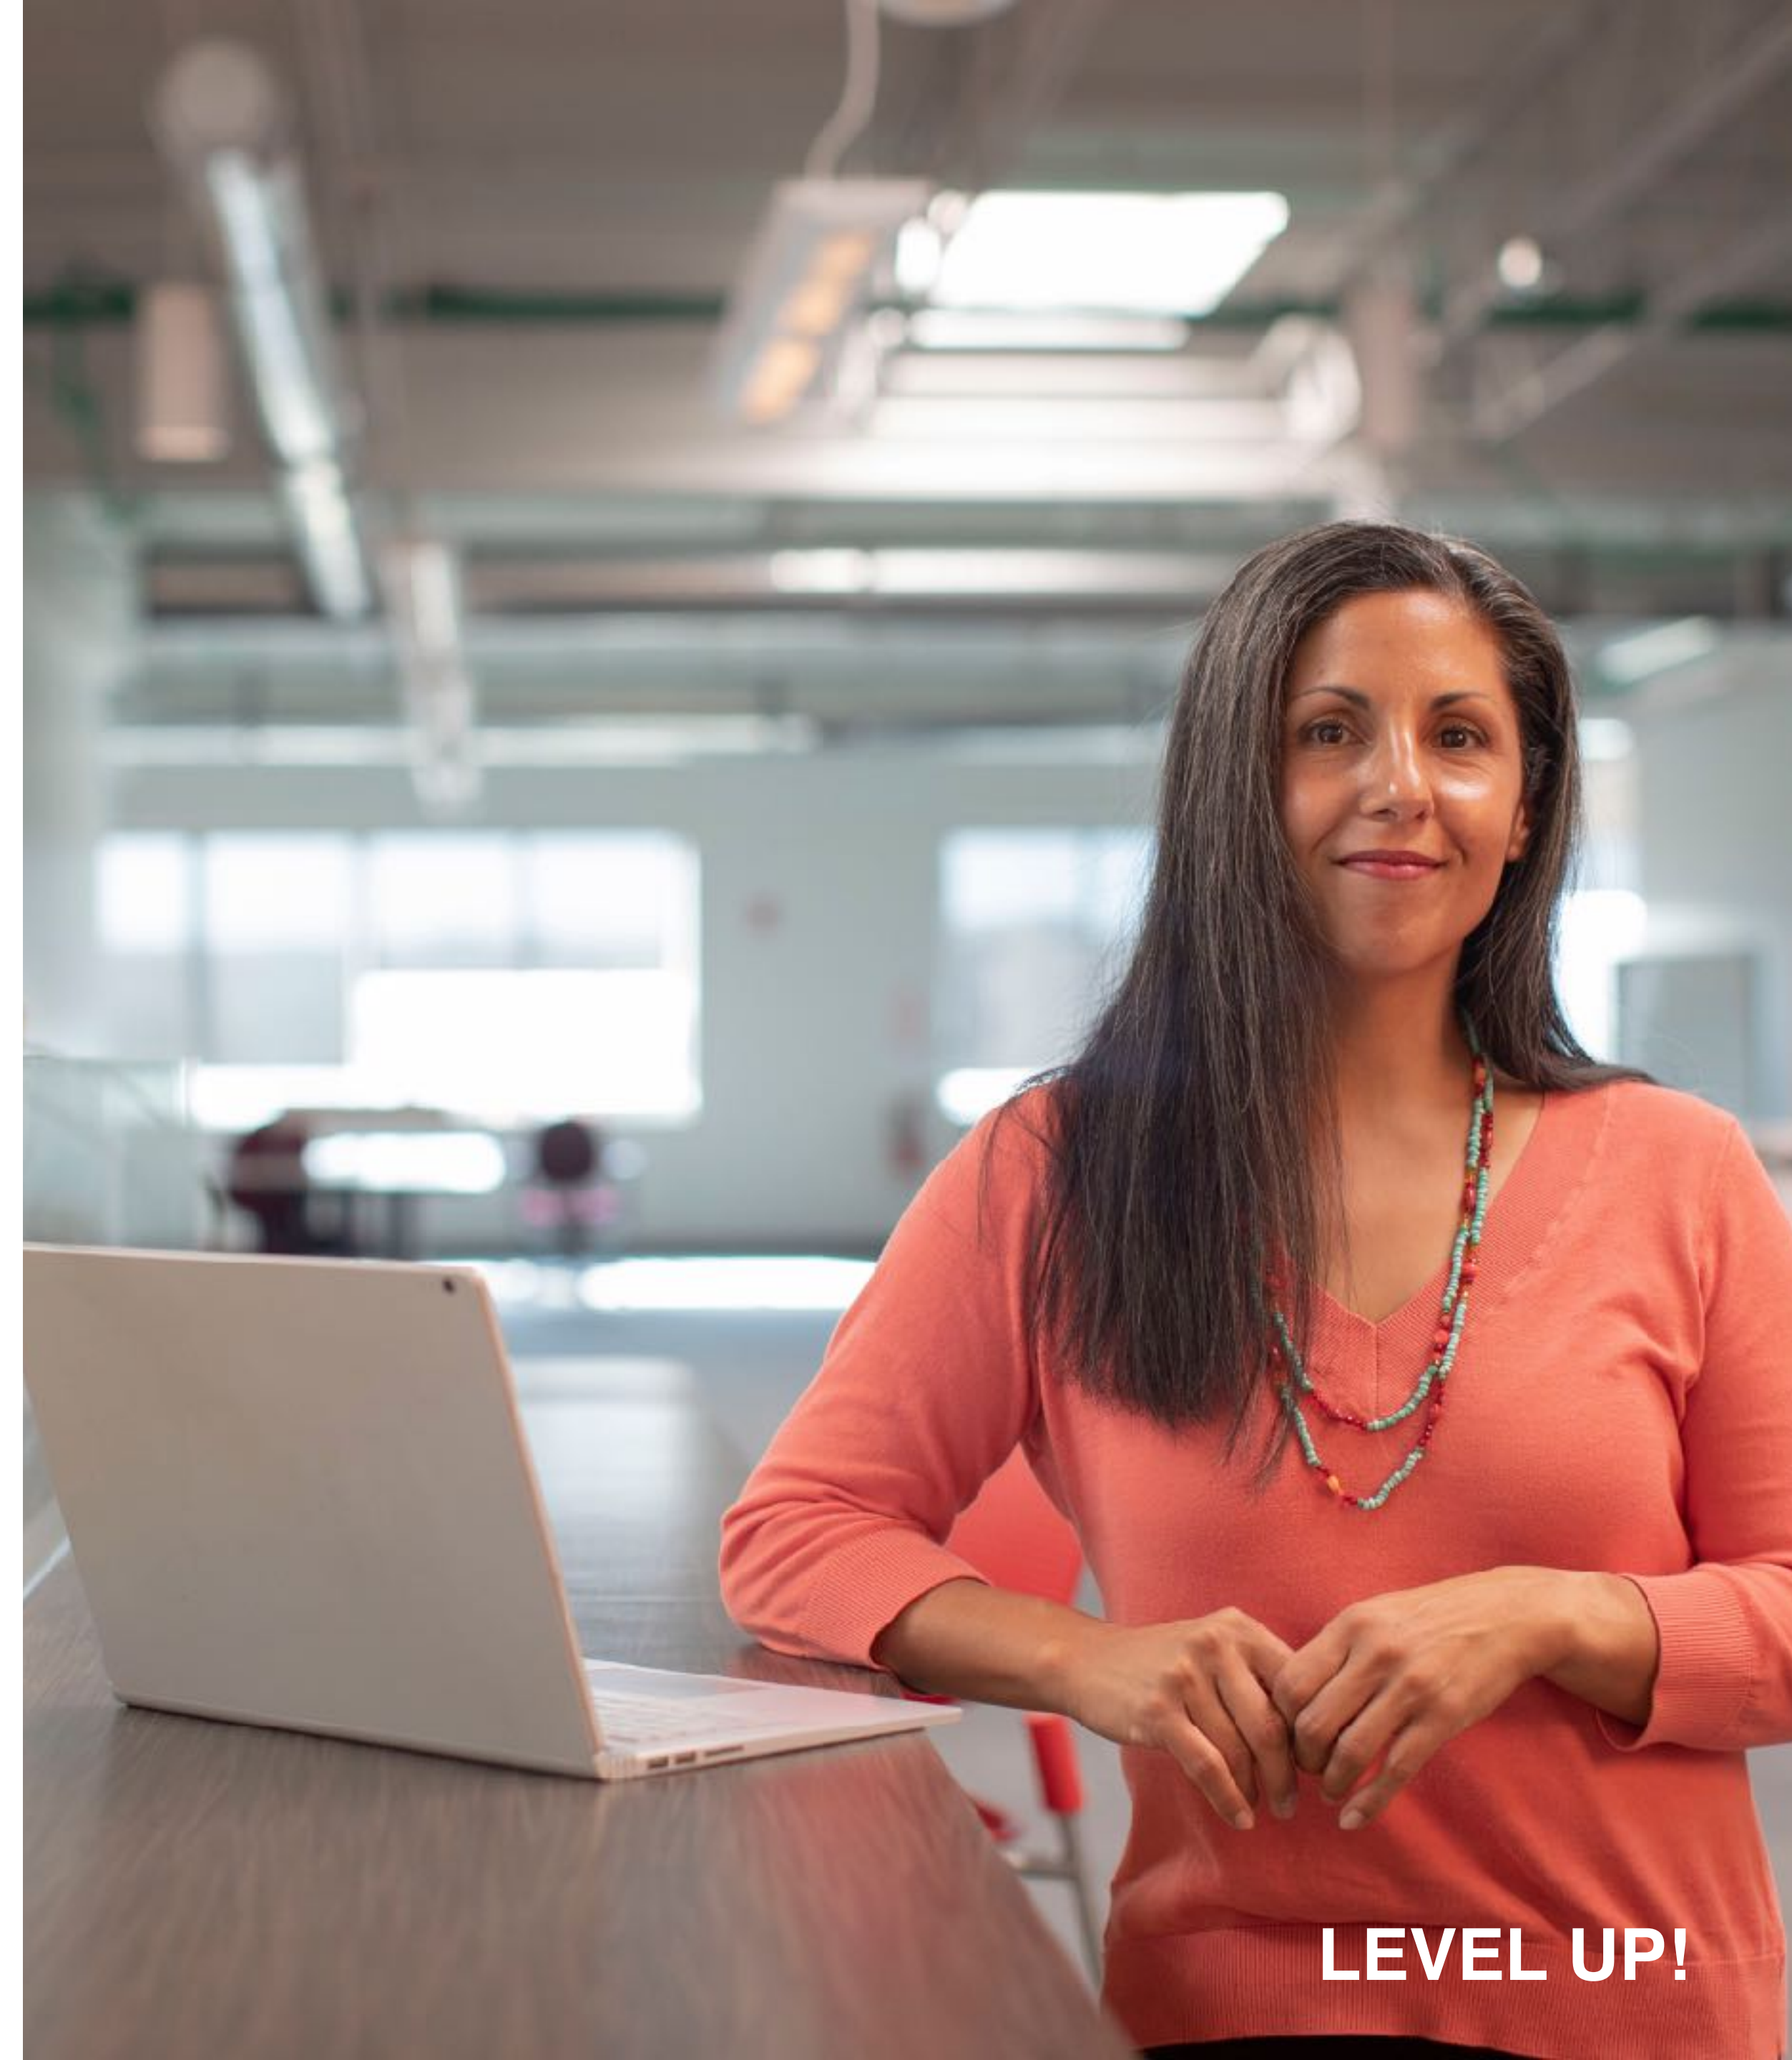

The pricing of MeetingPoint contains out of a one-time setup fee and a subscription. The setup includes designing the templates, room availability and schedule overview. In addition, there are annual or monthly costs to use the MeetingPoint module (price per location).

## Discuss your project

Sometimes it's best to talk in person about the considerations and the goals you have with signage. Let us join your signage team and we are happy to guide you in the right direction.

**SCHEDULE A MEETING**

You can easily schedule an online meeting with one of our consultants using the button here above.
