

# MagicInfo Workshop or online training

## Workshop MagicInfo

MagicInfo Service offers full support to help you develop your MagicInfo skills. By exploring and applying the possibilities, you let the software reach its full potential. That's why MagicInfo Services provides an insight in the program and working with your very own content. With one of our experienced consultants, the in-house workshop uses a hands-on approach by creating a playlist that you can work with directly.

During the workshop, the most used functions are adressed. A combination between explanation and performance lets you get the best out of the software. After the training you receive two manuals: the Samsung MagicInfo manual and a standard workflow instruction of the MagicInfo Services.

### In-house workshop MagicInfo

Average time	4 hours
Participants	min. 3 max. 8
